RT-EVP/Spirit box combo
Posted by jr244888 - 19 Dec 2011 03:31

_____

has anyone purchased or used one and feels whether or not it is a good item for others to purchase for how much it costs?

_____

I'm curious since we're on the subject of spirit box and recording if anyone has seen an application for Android phones which will do exactly this. I'm generally not a proponent of using phones on any investigation, but in this case I may be, especially if its in airplane mode. (Transmitters off)

I ask because all the components to have an EXCELLENT spirit box are right there. Most android phones have a AM/FM radio built in, and also can record EVP's. So I'm just curious if anyone has seen an application that ties these two together?

I think that would be an awesome app!

That would be a cool app, though my Android phone only has an FM radio on it.

If only I knew how to build Android apps...

How do you record on the Android? I would love to do that.

Like they say, "There's an app for that". I have the Android Entity Sensor Pro (EMF detector) on my phone. It had some great features including recording audio and EMF readings. You can transfer the readings to your computer for analysis. Of course, it doesn't take the place of a K2 or Mel meter. But, if your out and about without one and want to make a quick check you can use the app.

I used a program called Virtual Tape recorder. It has the benefit of allowing you to select record quality which most voice recorders don't. And the quality of most recorders just isn't up to par with EVP recording.

But I would really suggest spending the extra few bucks to purchase a cheap stand-alone voice recorder with a high quality record format. You can do so for about $30 refurbished.
